

Migros Spitzacker Shopping Centre (Switzerland)

Case Study

In spring 2015, the Spitzacker shopping centre in Urdorf (ZH) was reopened after considerable renovation and extension. The retail area has been totally transformed and has almost doubled in size, with numerous new tenants. There are 13 new stores housed in the complex, built in the style of a bright, spacious mall with a glass roof.

All shop entrances feature record THERMCORD sliding doors with thermal insulation. The benefits of the THERMCORD model are very clear, as it plugs one of the last gaps in a building's thermal insulation. During the day the doors provide regular, reliable service, and after closing prevent heat loss, or heat penetrating into a space requiring controlled air temperatures.
